Quick-Tag™ Metadata Editor

Quick-Tag™ enables you to navigate through your Large & XL previews, while you quickly apply a chosen Metadata field.
(Designed for fast and simple application of Keywords, Image Descriptions, Copyright, etc...)

The screenshot shows the Quick-Tag Metadata Editor interface. On the left is a vertical image of a person's hair. The editor panel on the right includes a dropdown menu for 'Editor' set to 'Approved', a list of actions (INSTANT SEND, RETOUCH NOTES, ADD / VIEW NOTES, POP UP, METADATA), and a section titled 'Quick Tag - Metadata Editor™'. This section has a 'Copyright' dropdown, a 'Get' button, a text input field containing 'All rights reserved by Name Here', and a 'Save' button. Below this is a 'Quick Edit - Keyboard Controls™' section with buttons for 'Prev & Next', 'Image size', and 'Select'. Five callout boxes with pink lines point to specific elements: 'Metadata field selector' (the Copyright dropdown), 'Get from prev image' (the Get button), 'Enter data here' (the text input field), 'SAVE' (the Save button), and 'SAVE & go to previous image' / 'SAVE & go to next image' (the left and right arrow buttons).

"Metadata field selector"
Choose the Metadata field you wish to record data into.

"Get from prev image"
Gets metadata (Selected field) from the previous image. This is a LOAD-ONLY action. Click Save to record information to your image.
